In late 2012, the Foundation for a Healthy Kentucky and The Health Foundation of Greater Cincinnati sponsored the Kentucky Health Issues Poll (KHIP), a telephone survey to find out what Kentuckians think about various health issues that impact our communities, our state, and our nation. This report presents the views expressed by respondents from Eastern Kentucky including the Big Sandy, Buffalo Trace, Cumberland Valley, FIVCO, Gateway, Kentucky River and Lake Cumberland Area Development Districts. About 22% of Kentuckians live in this 46-county region (please see “About the Kentucky Health Issues Poll” on page 16 for the list of counties).

In general, responses from Eastern Kentucky residents were comparable to the state as a whole. Like the statewide results, in Eastern Kentucky:

- The majority favored integration of mental health and medical services (69%)
- The majority found health care costs to be a financial burden (62%)
- The majority needed more information about how the Patient Protection and Affordable Care Act would affect them personally (61%)
- The majority of adults favored a statewide, smoke-free law (58%)

There were a few key differences in Eastern Kentucky, as compared to the rest of the state. Adults in Eastern Kentucky were more likely to:

- Rely on home remedies or over-the-counter drugs instead of going to the doctor
- Know someone who had experienced problems as a result of abusing prescription pain relievers
- Recognize that drug poisonings / overdoses were the leading cause of unintentional death in the state

Additionally, adults in Eastern Kentucky were less likely to:

- Have dental insurance
- Describe their health status as “excellent” or “very good”

In 95 out of 100 cases, the statewide estimates will be accurate to ±2.5% and Eastern Kentucky estimates to ±5.3%. There are other sources of variation inherent in public opinion studies, such as non-response, question wording, or context effects that can introduce error or bias.
Health and the Economy

Rising health care costs and the economic downturn have created new challenges for many Americans. To better understand the relationship between health and the economy, KHIP included several questions about the costs associated with care and how this might impact future generations.

Past and Future Generations

The American Dream is the belief that every American has the opportunity to achieve success through hard work. More broadly defined, it is the belief that if we work hard, we will get ahead and life will be better for the next generation.

Economic Outlook

More than half of Eastern Kentucky adults (52%) think their parents’ generation was better off economically. More than 3 in 10 (33%) think the current generation of working adults is about the same economically as their parents’ generation. More than 1 in 10 (14%) say their parents’ generation was worse off.

KHIP also asked about the next generation of American workers – those who are children today. The majority of Eastern Kentucky adults (65%) said the next generation will be worse off than the current generation of working adults. More than 2 in 10 adults in this region (17%) think the next generation will fare about the same economically, and just over 1 in 10 (15%) think the next generation will be better off than the current generation.

The economic outlook for past and future generations in Eastern Kentucky was similar to the state as a whole.

Health Outlook

The majority of Eastern Kentucky adults (52%) think their parents’ generation was healthier than the current generation, while just over 2 in 10 (23%) think it was less healthy. More than 2 in 10 adults in this region (25%) think their parents’ generation was about as healthy as the current generation. Compared to the state as a whole, Eastern Kentucky adults were significantly more likely to describe the previous generation as healthier than the current generation of working adults.

When asked about the next generation, just 2 in 10 Eastern Kentuckians (23%) said they thought it would be healthier than the current generation, while nearly 5 in 10 (48%) believe it will be less healthy. Additionally, nearly 3 in 10 (26%) think the next generation will be about as healthy.

Eastern Kentucky adults were more likely to report that the next generation will be less healthy than the current generation of working adults, however this difference is not statistically significant.

---

1 KHIP asked, “Thinking about your parents’ generation, do you think economically they were better off, worse off or about the same as the current generation of working adults?”

2 KHIP asked, “Thinking about the next generation of American workers who are children today, do you think economically they will be better off, worse off or about the same as the current generation of working adults?”
How Kentucky adults think their health compares with other generations (Percentages do not add to 100% because the response “don’t know” is not included.)

Financial Burden of Health Care

Nationally, the cost of health insurance has increased dramatically – this means most American families are spending a larger percentage of their income on co-pays and health insurance premiums. In Kentucky, health insurance costs for the average family now exceed $15,000 per year.⁵

Health Care Cost Burden

When asked what (if any) part of health care costs are the greatest financial burden, more than 6 in 10 Eastern Kentucky adults (62%) said that some aspect of their health care costs were a financial burden. This is similar to the percentage of all Kentucky adults who reported that health care was a financial burden (59%).

Nearly 4 in 10 Eastern Kentucky adults (36%) report that paying for health care and health insurance is not a financial burden. However, more than 2 in 10 (26%) said that co-pays for doctor visits and prescription drugs were the greatest burden. More than 1 in 10 adults in this region (15%) report that the deductibles they pay before insurance kicks in were the greatest burden, and a similar number said insurance premiums (14%) were the greatest financial burden. Less than 1 in 10 report that some other source was a burden (7%) or they didn’t know (3%).

Among those in Eastern Kentucky who reported some financial burden from health care costs, half (50%) report that it makes it hard to pay for things they need. Additionally, 3 in 10 (28%) report it makes it hard to pay for things they want. About 1 in 10 (7%) report it is a burden but they haven’t had to adjust spending in other areas, and more than 1 in 10 (12%) report it’s costly, but they can afford it. Compared to the state as a whole, Eastern Kentucky respondents were more likely to say health care costs made it hard to pay for needed items, and less likely to say they did not need to adjust their spending in other areas.

---

³ KHIP asked, “Thinking about your parents’ generation, do you think they were healthier, less healthy, or about the same as the current generation of working adults?”

⁴ KHIP asked, “Thinking about the next generation of American workers who are children today, do you think they will be healthier, less healthy or about the same as the current generation of working adults?”

Thinking about your health care costs, which of the following do you find to be the greatest financial burden? (Percentages may not add to 100% due to rounding)

**Eastern Kentucky**

- Not a burden: 36%
- Deductibles: 15%
- Co-pays: 26%
- Insurance premiums: 14%
- Other: 7%
- Don’t Know: 3%

Total who find costs a burden: 62%

**How much of a burden are your health care costs?**

(Asked only of those who reported a financial burden. N = 206)

- They make it hard to pay for things I need: 50%
- They make it hard to pay for things I want: 28%
- They are a burden, but no adjustment needed: 7%
- They are costly, but I can afford them: 12%

*Does not add to 100% because the response “don’t know” is not included.

**Kentucky**

- Not a burden: 37%
- Deductibles: 19%
- Co-pays: 18%
- Insurance premiums: 16%
- Other: 6%
- Don’t Know: 4%

Total who find costs a burden: 59%

**How much of a burden are your health care costs?**

(Asked only of those who reported a financial burden. N = 981)

- They make it hard to pay for things I need: 40%
- They make it hard to pay for things I want: 28%
- They are a burden, but no adjustment needed: 16%
- They are costly, but I can afford them: 14%

*Does not add to 100% because the response “don’t know” is not included.

**Putting Off Care Due to the Cost**

For the state as a whole, more than 6 in 10 adults (64%) report that they or another family member living in their household have put off some form of health care because of the cost in the last 12 months.

In Eastern Kentucky specifically, more than 6 in 10 respondents (66%) said they have relied on home remedies or over-the-counter drugs instead of going to see the doctor. More than half (53%) have put off or postponed getting health care they needed. More than 4 in 10 said they had skipped a recommended medical test or treatment (48%), skipped dental care or check-ups (47%), not filled a prescription for medicine (45%), or cut pills in half or skipped doses of medicine (42%). About 2 in 10 adults in this region (23%) said they have had problems getting mental health care because of the cost.

Overall, Eastern Kentucky adults were more likely to report that they had put off some form of health care because of the cost in the last 12 months.

**Percentage of respondents who say they or another family member living in their household have done each of the following in the past 12 months because of the cost**

Rely on home remedies or over-the-counter drugs instead of going to see a doctor

- Eastern Kentucky: 66%
- Kentucky: 48%

Put off or postpone getting health care you needed

- Eastern Kentucky: 53%
- Kentucky: 43%

Not fill a prescription for medicine

- Eastern Kentucky: 45%
- Kentucky: 37%

Skip dental care or check-ups

- Eastern Kentucky: 47%
- Kentucky: 37%

Skip a recommended medical test or treatment

- Eastern Kentucky: 48%
- Kentucky: 36%

Cut pills in half or skip doses of medicine

- Eastern Kentucky: 42%
- Kentucky: 30%

Have problems getting mental health care

- Eastern Kentucky: 23%
- Kentucky: 19%
Oral Health Care

Routine dental care is essential for maintaining overall health and well-being. Regular and preventive care can help catch minor problems before they become serious.

Utilization of Oral Health Care Services

According to KHIP, fewer than 6 in 10 Eastern Kentucky adults (54%) visited the dentist within the past year, compared to 70% nationwide. More than 2 in 10 Eastern Kentucky adults (21%) reported that it had been more than five years since they last visited the dentist.

Having a usual dentist, clinic, health center, or other oral health care provider is known as a usual source of care. People who have a usual source of care are more likely to seek appropriate and timely health care when they need it. More than 6 in 10 Eastern Kentucky adults (62%) reported having a personal dentist or oral health provider. This means that nearly 4 in 10 Eastern Kentucky adults (36%) said they do not have a personal dentist or oral health provider.

Affording Oral Health Care

Having dental insurance is an important factor in being able to get oral health care. Nearly 6 in 10 Eastern Kentucky adults (59%) reported having no dental insurance of any kind, compared to 51% of all Kentucky adults. We estimate that 1.7 million Kentucky adults lack dental insurance.

While most Eastern Kentucky adults (95%) report not owing money for dental bills, many are going without needed dental care. As noted in the previous section, more than 4 in 10 adults in the region (47%) reported that they or someone in their household skipped dental care or check-ups in the last 12 months because of the cost.

State-level results indicate that twice as many adults without dental insurance reported going without needed oral health care as did those with dental insurance.

---

Health Care System

The way that we seek and utilize health care services, obtain health information, and maintain our own health status is heavily influenced by the health care system. This section explores how the structures and policies of the U.S. health care system work for Kentuckians.

Patient Protection and Affordable Care Act

KHIP has tracked Kentuckians’ views about the Patient Protection and Affordable Care Act (ACA) since it became law in March 2010. In June 2012, the Supreme Court upheld the constitutionality of the ACA, but it remains the subject of debate. This year, KHIP asked Kentuckians about the future of the law.

Opinions about the Affordable Care Act

Fewer than 4 in 10 (36%) of Eastern Kentucky adults reported having enough information about the ACA to understand how it would affect them personally. Although this is an increase from previous years, it means that 6 in 10 adults in the region (61%) need more information (3% did not know if they had enough information).

Despite the need for more information about the law, about 3 in 10 Eastern Kentucky adults (31%) reported having a generally favorable opinion of the ACA, while more than 4 in 10 had a generally unfavorable opinion of it (48%). More than 2 in 10 Eastern Kentucky adults (21%) expressed no opinion about the law. The Eastern Kentucky respondents reported similar views to the state and the nation.

Opinions on the Future of the Law

Kentuckians were asked if opponents of the law should continue efforts to block the law, and nearly half (47%) said opponents should stop their efforts and move on to other national problems. Nearly 2 in 10 (17%) did not express an opinion. Eastern Kentuckians were less likely to want opponents of the law to stop their efforts to block the law than the state as a whole and more likely to not know what opponents of the law should do next.

Kentuckians also had a variety of opinions when asked what Congress should do next with the ACA. In Eastern Kentucky, 2 in 10 adults (22%) said Congress should expand the law, and a similar number (22%) wanted to keep the law as it is. More than 2 in 10 (23%) said Congress should repeal the law, and 2 in 10 (21%) wanted to repeal the law and replace it with a Republican-sponsored alternative. In each case, these results are similar to the state and the nation.

Given what you know about the new health reform law, do you have a generally favorable or generally unfavorable opinion of it? (Percentages do not add to 100% because the response “don’t know” is not included.)

Integrated Care

The current U.S. health care system separates treatment for physical and mental illnesses. This can mean people may delay or may not get needed care because it’s too hard to go to more than one place or because the cost is too high.

More and more, Kentucky health care providers are talking about and working toward an integrated system of care. Integrated care means that people’s physical health and mental or behavioral health are treated in a coordinated, convenient and respectful way, often in the same place. Integrated care is an important tool in achieving the “Triple Aim” of improving people’s quality of care, improving the health of the population and reducing costs.

More than 6 in 10 Eastern Kentucky adults (69%) strongly or somewhat favor offering physical and mental health services in the same place. The percentage of Eastern Kentuckians who supported integrated care declined slightly from the 2009 KHIP, however this change was not statistically significant. In 2009, 73% strongly or somewhat favored offering physical and mental health services in the same place.

Opponents of the health care law should…

Stop their efforts to block the law from being implemented/move on to other national problems

Types of Providers

Research has shown that so-called “midlevel” clinicians such as nurse practitioners (NPs) and physician assistants (PAs) can increase health care access for rural and underserved populations while limiting costs – a critical issue for Kentucky.

Some experts want to add a new “midlevel” profession: Advanced Dental Hygiene Practitioners (ADHPs). An ADHP is a dental hygienist with additional education. An ADHP can provide diagnostic, preventive and therapeutic dental services, such as filling cavities. ADHPs are not currently licensed to practice in Kentucky.

After hearing a brief description of the profession, about 8 in 10 Eastern Kentucky adults said they would be comfortable seeing a nurse practitioner (79%), or physician assistant (81%) for routine care. Additionally, 7 in 10 said they would be comfortable seeing an advanced dental hygiene practitioner (70%). In each case, the proportion of Eastern Kentucky adults who were comfortable seeing a “midlevel” clinician for routine care was similar to the state average.

In general, reported comfort was higher among those who received care from a NP or PA in the past year. We do not know from these data if personal experience with “midlevel” clinicians increases comfort with them, or if people who are more comfortable with “midlevel” clinicians are also more likely to seek care from them.

Adults very or somewhat comfortable with certain types of health care providers (Graph shows only those who were comfortable seeing this type of provider for routine care. Combined values may not equal total due to rounding.)

9 The term “midlevel” clinician is used by the U.S. Drug Enforcement Administration to help monitor how prescription medications are dispensed. We recognize that this term is a flawed descriptor for these independently licensed healthcare providers.

10 Before assessing the respondent’s comfort level for each profession, the interviewer read the following definitions: A nurse practitioner is a special type of nurse who has additional experience, has completed additional education, usually a master’s degree or more, and has a special license such that he or she can see patients, diagnose ordinary illnesses and prescribe medications. A physician assistant is a licensed health care professional who has specific experience, has completed additional education, usually a master’s degree or more, and has a special license, such that he or she can see patients, diagnose ordinary illnesses, provide some treatment and prescribe medications. An advanced dental hygiene practitioner is a new type of dental hygienist who has a specific license and has completed additional education, typically such that he or she can provide diagnostic, preventive and therapeutic oral health services, such as filling ordinary cavities.
HIV Testing

Approximately 4,500 Kentuckians are living with HIV infection. However, it is estimated that 1 in 5 people who are HIV positive in the United States do not know they are infected. Because of this, the Centers for Disease Control and Prevention (CDC) recommends routine HIV screening for all patients ages 13-64 unless the patient declines. Because the screening guidelines apply only to people younger than 65, this section focuses on Kentuckians ages 18-64.

Slightly more than half of Eastern Kentucky adults ages 18-64 (59%) said they had been tested for HIV in the past. This means that more than 4 in 10 (37%) reported they have never been tested.

Provider Recommendations

Just 1 in 4 Eastern Kentucky adults ages 18-64 (26%) reported their medical provider has discussed HIV with them, as recommended by the CDC. This is slightly less than the state average (32%), however this difference is not statistically significant.

The Centers for Disease Control and Prevention recommends HIV testing as part of routine care for those 13-64 years of age. Has your medical provider discussed this with you? (Percentages do not add to 100% because the response “don’t know” is not included.)

14 The guidelines suggest services for patients younger than 18, but this poll surveys only adults.
Prescription Drug Use and Abuse

Prescription pain relievers are important for controlling pain in patients who need them, but these types of medication also carry the potential for abuse. KHIP asked respondents about their experiences with the prescription drug issue, and their views on legalizing the use of marijuana as a medication.

Prescription Pain Relievers

Kentucky ranks sixth in the nation for overdose deaths involving prescription pain relievers; in 2008, its rate was 17.9 deaths per 100,000 residents. These drug overdose deaths correspond to a steep increase in the sale of opioid prescription pain relievers (which include OxyContin, Vicodin, Percocet and codeine). Kentucky is in the top quarter of states in the rate of prescription pain relievers sold per capita.

Use of Prescription Pain Relievers

More than half of Eastern Kentucky adults (50%) reported being prescribed a pain reliever that could not be bought over the counter, such as OxyContin, Vicodin, Percocet, or codeine, in the last five years. This is similar to the rate for the state, where 55% of Kentucky adults report being prescribed a pain reliever that could not be purchased over the counter.

Abuse of Prescription Pain Relievers

Eastern Kentucky residents were asked if they had ever, even once, used a pain reliever such as OxyContin, Vicodin, Percocet or codeine when not prescribed or for the experience or feeling it caused. One in ten (10%) said they had done so. However, more than 4 in 10 Eastern Kentuckians (45%) reported that they have friends or family members who have experienced problems as a result of abusing prescription pain relievers. This is significantly higher than the proportion of all Kentucky adults (33%) who reported knowing someone who had abused prescription pain relievers.

Deaths Due to Drug Overdose

In 2010, there were more deaths in Kentucky due to unintentional drug poisonings than motor vehicle collisions for the first time. While the number of traffic deaths has remained about the same over the past 11 years, the number of unintentional drug deaths has risen sharply, from 205 in 2000 to 857 in 2010.

In Eastern Kentucky, nearly 7 in 10 adults (69%) were aware that drug poisonings/ overdoses were the leading cause of unintentional death in Kentucky. 2 in 10 respondents (25%) mistakenly believed that traffic accidents were the leading cause of unintentional death.

16 Ibid.
17 Kentucky Cabinet for Health and Family Services (CHFS), personal e-mail from Victoria Hubbard, Epidemiologist, Administrative & Quality Assurance Section, CHFS Vital Statistics.
18 Kentucky Cabinet for Health and Family Services (CHFS), personal e-mail from Victoria Hubbard, Epidemiologist, Administrative & Quality Assurance Section, CHFS Vital Statistics.
Medical Marijuana

In recent years, the Kentucky General Assembly has considered several bills about recreational and medicinal use of marijuana; however, none of these bills have passed.

Who should determine what is legal?

KHIP asked whether federal lawmakers, Kentucky lawmakers or Kentucky voters should decide whether marijuana is legal for medical purposes in Kentucky. Four in ten Eastern Kentucky adults (40%) said Kentucky voters should decide. More than 4 in 10 (43%) said lawmakers should decide (Kentucky 19%; federal 24%). A number of respondents (10%) said doctors should decide, even though this was not one of the response categories offered.

Should marijuana be legal under certain circumstances?

Nearly 8 in 10 Eastern Kentucky adults (78%) favor allowing residents to buy and use marijuana for medical purposes if it is recommended by their doctor. However, fewer than 4 in 10 (37%) favor allowing residents to buy and use marijuana under any circumstances. Fewer than 3 in 10 Eastern Kentuckians (26%) favor allowing residents to buy and use marijuana for recreational purposes. Views in Eastern Kentucky were similar to the rest of the state.

Who do you think should decide whether marijuana is legal for medical purposes in the Commonwealth of Kentucky? (Percentages do not add to 100 because the response “don’t know” is not included.)

19 “Physicians” was not one of the choices in the original question, but was offered by some respondents.
Healthy Environments

Where we live affects our health. The places where we live, work, play and pray – and the health policies governing those spaces – impact the things we do, the foods we eat, and even the air we breathe.

Statewide Smoke-free Law

Secondhand smoke poses serious health risks, and smoke-free environments are the only way to fully protect nonsmokers from these hazards.20 To reduce these risks, many states and communities have adopted smoke-free policies. According to the Centers for Disease Control and Prevention, 26 states and the District of Columbia have adopted comprehensive smoke-free laws.21 That means the law covers all workplaces, including bars and restaurants. In recent years the Kentucky legislature has considered a statewide law eliminating smoking in all indoor public places, although this legislation has not yet passed.

More than half of Eastern Kentucky adults favored a statewide smoke-free law (58%), while 40% opposed a law, and 3% had no opinion. This is not statistically different than the results from 2011, but an increase in support from 201022, when just 48% of Eastern Kentucky adults favored a statewide law. Support for the law in Eastern Kentucky is similar to results for the state as a whole.

Air Quality Concerns and Responses

Air pollution can cause upper respiratory infections and allergic reactions, and can aggravate symptoms for people with asthma and emphysema. The U.S. Environmental Protection Agency monitors air quality in communities across the nation to protect the public’s health, and it uses these data to report a daily Air Quality Index.23

Concern about Air Quality

About 4 in 10 Eastern Kentucky residents reported that they were somewhat (28%) or very (13%) concerned about the quality of air in their community. The majority of Eastern Kentuckians (59%) said they were not at all concerned about air quality. This is the opposite of the results for the state as a whole, where just over half said they were concerned (51%) about air quality.

Would you favor or oppose a state law in Kentucky that would prohibit smoking in most public places, including workplaces, public buildings, offices, restaurants and bars? (Graph presents only those who favor a state law)

Air Quality Concerns and Responses

How concerned are you with the quality of air in your community? (Graph shows only those who said they were concerned. Totals reflect rounding.)

Concern about Air Quality

About 4 in 10 Eastern Kentucky residents reported that they were somewhat (28%) or very (13%) concerned about the quality of air in their community. The majority of Eastern Kentuckians (59%) said they were not at all concerned about air quality. This is the opposite of the results for the state as a whole, where just over half said they were concerned (51%) about air quality.

22 In 2010, KHIP asked “Would you favor or oppose a statewide, smoke-free law in Kentucky?”
23 Air Quality Index data are available at www.airnow.gov
Actions to Limit Exposure

When air quality is at an unhealthy level, people can protect themselves by limiting outdoor activities or avoiding heavy exertion.

About 4 in 10 Eastern Kentucky adults (41%) indicated they change or limit their activities when they hear of an air quality alert being issued, including nearly 2 in 10 (18%) who said they change or limit their activities a lot. This is lower than results for the state as a whole, where nearly half (49%) reported changing or limiting their activities.

Actions to Reduce Emissions

People can also help protect others from the effects of air pollution by combining short car trips and turning off their car engine when they are not moving to reduce the amount they pollute.

More than 6 in 10 Eastern Kentucky adults (71%) said they would wait at least four minutes before turning off their car engine when in a waiting car and not moving, as in a traffic jam, at a train crossing or at a drive-through. This includes the 3 in 10 (32%) who said they never turn off their car engine. Responses in Eastern Kentucky were similar to the state as a whole.

24 Experts recommend turning off a waiting car after 10 seconds to save gas and limit emissions.
Demographic Profile

In addition to the questions on health issues, respondents were asked several demographic questions. These findings are detailed below. (Percentages may not add to 100% due to rounding.)

Overall Health Status

An important indicator of community health is overall health status. In 2012, about 3 in 10 Eastern Kentucky adults (32%) described their health status as “excellent” or “very good,” lower than the proportion for the state as a whole (42%). This is consistent with findings from 2011, but lower than in previous years.

Kentucky adults reporting “excellent” or “very good” health

---

25 The question “Would you say that in general your health is excellent, very good, fair or poor?” was not asked on the 2009 KHIP.
### Poverty Status

The percentage of Eastern Kentucky adults who lived below 100% of the federal poverty guidelines (FPG)\(^26\) was higher than the state as a whole. In 2012, about 4 in 10 Eastern Kentucky adults (46%) were living in poverty, consistent with 2011 findings.

#### Adults living at less than 100% FPG

### Insurance Coverage

#### Not Having Health Insurance Coverage

Having health insurance is an important factor in being able to get needed health care. Because nearly all Kentuckians older than 65 (98%) are insured, this section focuses on Kentuckians ages 18-64.

About 3 in 10 working-age Eastern Kentucky adults (29%) were uninsured at the time of the Poll. This is a decrease in the number of uninsured adults since 2011. Working-age adults in Eastern Kentucky are similarly likely to be uninsured as the state average (28%).

#### Gaps in Health Insurance Coverage

Another factor in being able to get health care is how stable a person’s health insurance coverage is. A measure of this is whether a person has been covered continuously for the past 12 months. In Eastern Kentucky, 1 in 10 (10%) of adults ages 18-64 were insured at the time of the KHIP, but had been uninsured at some point in the past 12 months. Therefore, 4 in 10 working-age Eastern Kentucky adults (39%) had been uninsured at some point in the last 12 months, including at the time of the Poll.

---

\(^{26}\) In 2011, 100% of the federal poverty guideline (FPG) was an annual income of $22,350 and 200% FPG was an annual income of $44,700, both for a family of four.
This report presents a selection of questions with data specific to Eastern Kentucky. Additional state and regional data highlights are available from the Foundation for a Healthy Kentucky (www.healthy-ky.org) or The Health Foundation of Greater Cincinnati (https://www.healthfoundation.org/kentucky-health-issues-poll). Users can access the entire survey dataset, as well as results by region or demographic group, at www.oasisdataarchive.org.

If there is a question or topic you would like to see on a future KHIP, please contact Jennifer Chubinski, Director of Community Research at The Health Foundation of Greater Cincinnati (jchubinski@healthfoundation.org) or Sarah Walsh, Senior Program Officer at the Foundation for a Healthy Kentucky (swalsh@healthy-ky.org).

**Spotlight on Eastern Kentucky**

The Kentucky Health Issues Poll, funded by the Foundation for a Healthy Kentucky and The Health Foundation of Greater Cincinnati, is conducted annually to assess what Kentuckians think about a variety of health topics affecting the Commonwealth. The Kentucky Health Issues Poll was conducted September 20 – October 14, 2012 by the Institute for Policy Research at the University of Cincinnati.

A random sample of 1,680 adults from throughout Kentucky was interviewed by telephone. This included 1,360 landline interviews and 320 cell phone interviews. Of these, 343 respondents resided in the Eastern Kentucky Area Development District. The counties included in this region are:

- Adair County
- Bath County
- Bell County
- Boyd County
- Bracken County
- Breathitt County
- Carter County
- Casey County
- Clay County
- Clinton County
- Cumberland County
- Elliott County
- Fleming County
- Floyd County
- Green County
- Greenup County
- Harlan County
- Jackson County
- Johnson County
- Knott County
- Knox County
- Laurel County
- Lawrence County
- Lee County
- Leslie County
- Letcher County
- Lewis County
- Magoffin County
- Martin County
- Mason County
- McCreary County
- Menifee County
- Montgomery County
- Morgan County
- Owsley County
- Perry County
- Pike County
- Pulaski County
- Robertson County
- Rockcastle County
- Rowan County
- Russell County
- Taylor County
- Wayne County
- Whitley County
- Wolfe County
