AVONDALE
THE HEALTH OF OUR COMMUNITY

Results from the 2017 Community Health Status Survey
Avondale was incorporated as a village in 1864, one of Cincinnati’s first and most beautiful suburbs. Its diverse housing, including its beautiful mansions, are featured in the early literature about the neighborhood and are a consistent theme in the neighborhood’s growth. The neighborhood has gone through some distinct ethnic changes in the past century. The pivotal events that ushered in these changes were the riots of the late 1960s. In the decades before the riots, Avondale gradually transitioned from a primarily Jewish neighborhood to a predominantly African American one.

Avondale is proud of its distinction as the largest African American community in the city. It is home to generations of families who choose to live, work and worship in Avondale. Preservation of this culture is paramount to Avondale residents. The community is fortunate to have the Cincinnati Zoo and Botanical Garden, Gabriel’s Place, Cincinnati Children’s Hospital, UC Health, Ronald McDonald House and its schools as critical stakeholders in the battle against health disparities. Cincinnati Children’s further provides health resources in the community, including two school-based health centers at South Avondale School and Rockdale Academy, and a dental clinic connected to the U.S. Bank Boys & Girls Club. Avondale Town Center, set to open in spring 2019, will also house a full service UC Health clinic.

In partnership with stakeholders and community organizations, and with the support of Interact for Health, LISC and the Community Building Institute, the Avondale Development Corporation and Avondale residents are currently in the process of leading a quality-of-life initiative for the neighborhood. In addition, the Avondale Community Council, Avondale Running Club, the Urban League, go Vibrant, Community Builders, Cincinnati Children’s, the Cincinnati Zoo, Green Umbrella, Art Works, the city of Cincinnati, Cincinnati Public Schools, the Cincinnati Police Department and Fifth Third Bank are working closely with residents to improve quality of life in the neighborhood. Avondale’s quality-of-life neighborhood plan lists health, particularly mental health and safety, among its greatest priorities.

Efforts to improve health are led by the neighborhood’s health partners, the Avondale Development Corporation and the Quality of Life Team. Based on the close involvement of Avondale residents and these
partners, Avondale has recently shifted to focus on communitywide health. While Avondale is proud of its title as Million Step Challenge Champions in both 2016 and 2017, and continues to work with go Vibrant and Green Umbrella on active living initiatives in the neighborhood, the community cannot ignore the various effects of the opioid crisis in Avondale. Attention to this health crisis as well as trauma-related concerns such as adverse childhood experiences and mental health have been identified as key health issues by the community.

This report focuses on survey responses from adults in the Avondale area of Cincinnati, including Avondale, North Avondale and Paddock Hills. For perspective, the results for all adults in the region are also noted on each page. These regional results include responses from Avondale adults as well as responses from all other adults in the surrounding 22-county survey region (see map on page 34). While changes from past results are important to note, please also note that small subgroups have a larger margin of error and are more likely to be volatile than the larger regional sample. It is important to monitor changes over time to see if trends continue.
About 5 in 10 Avondale adults report excellent or very good health

Adults’ overall self-rated health status is an important indicator of well-being. Research has made a strong link between people’s response to this question and their predicted length and quality of life. CHSS asked, “In general, would you say your health is excellent, very good, good, fair or poor?”

The percentage of Avondale adults who report excellent or very good health has INCREASED since 2010.

**AMONG ALL ADULTS IN THE REGION:** 49% reported excellent or very good health in 2017.
Avondale adults most frequently report high blood pressure, high cholesterol, and asthma

Chronic illness can create a physical, emotional and financial burden for people. If not monitored and managed well, these conditions can have a devastating impact on long-term health and survival. CHSS asked, “Has a doctor or other health care provider ever told you that you have …”

Percentage of Avondale adults who have been diagnosed with:

- **High blood pressure**: 36%
- **High cholesterol or triglycerides**: 22%
- **Asthma**: 22%
- **Severe allergies**: 16%
- **Diabetes**: 15%
- **Depression**: 12%
- **Heart trouble or angina**: 8%
- **Cancer**: 6%
- **Chronic lung disease**: 6%
- **Stroke**: 3%

**AMONG ALL ADULTS IN THE REGION** in 2017:
- 30% reported having been told they had high blood pressure
- 27% reported high cholesterol or triglycerides
- 21% reported depression
- 18% reported asthma
- 14% reported severe allergies
- 13% reported diabetes
- 10% reported heart trouble or angina
- 9% reported cancer
- 6% reported chronic lung disease
- 3% reported stroke
6 in 10 Avondale adults overweight or obese

Maintaining a healthy weight can support good health. Being overweight or obese increases a person’s risk for diabetes, heart disease, respiratory conditions and some cancers. It can also make it more difficult to engage in some daily activities.

CHSS asked adults their weight and height, and used these responses to determine if they were obese using the Body Mass Index (BMI).¹

Based on BMI, a person who is 5 feet 4 inches tall would be considered overweight at 150 pounds and obese at 180 pounds. A person who is 6 feet tall would be considered overweight at 190 pounds and obese at 220 pounds.

Avondale adults who are obese or overweight (Percentages may not add to 100 percent because of rounding.)

The percentage of Avondale adults who are overweight or obese has remained steady since 2010.

Among all adults in the region: 32% were obese and 36% were overweight in 2017.
8 in 10 Avondale adults report safe sidewalks and shoulders in their neighborhood

Being physically active is one of the most important things people can do to improve their health. According to the Centers for Disease Control and Prevention (CDC), regular physical activity can reduce the risk of chronic diseases, improve muscle and bone strength, improve mental health and increase life expectancy. One thing that can influence physical activity, including walking, is access to sidewalks. Studies have shown that people are more likely to use sidewalks that are in good condition than sidewalks that are not.

CHSS asked adults in the region whether they agreed or disagreed with the following statement: “There are sidewalks or shoulders on streets in my community that allow for safe walking, jogging, or biking.”

The percentage of Avondale adults reporting safe sidewalks has INCREASED since 2013.

AMONG ALL ADULTS IN THE REGION: 73% reported safe sidewalks or shoulders in 2017.
Most Avondale residents walk each day

One of the easiest ways to increase physical activity is by walking. Walking is especially accessible because it does not require any special skills or facilities. CHSS asked adults in the region how many days each week they walk for at least 10 minutes.

Number of days each month that Avondale adults report walking at least 10 minutes a day (Percentages may not add to 100 percent because of rounding.)

- 0% 20% 40% 60% 80% 100%
- 14% 23% 54% 9%

1-3 days 4-6 days 7 days No days

AMONG ALL ADULTS IN THE REGION: 57% reported that they walk at least 10 minutes every day in 2017.

About 5 in 10 Avondale adults walk at least 10 minutes per day.

2 in 10 Avondale adults sit for eight or more hours each day

Long periods of time spent sitting, even when paired with moderate physical activity, can lead to poor health. Studies have shown that sedentary behavior can increase the risk of cardiovascular disease, cancer and type 2 diabetes.

Percentage of Avondale adults who report sitting eight or more hours per day

- 0% 20% 40% 60% 80% 100%
- 22%

AMONG ALL ADULTS IN THE REGION: 25% sit for eight hours or more per day in 2017.
Measuring physical activity at work and leisure

The 2017 CHSS incorporated the International Physical Activity Questionnaire (IPAQ), short form. This form is designed to measure adults’ physical activity throughout the entire day. Adults are asked to report their level of activity over the past seven days in four categories: vigorous activity, moderate activity, walking and sitting.

Among all adults in the region: 17% reported low levels of activity, 23% reported moderate levels of activity, and 60% reported high levels of activity in 2017.

Results for all adults in our region and for Avondale adults show more self-reported physical activity than is sometimes reported. One possible reason for this is that measurements of physical activity often rely on self-reports of activity outside of working hours only. The IPAQ asks respondents to report about all activity, including at work, at home and at leisure. Using the IPAQ, people could qualify as “moderately” or “highly” active because of the time they spend on their feet as part of their job, even if they have little or no activity outside the workplace.

This is the first time CHSS has incorporated this tool to measure physical activity. Additional research is required to better understand how we can use self-reported measures to explore physical activity levels in both work and non-work environments.
About 3 in 10 Avondale adults eat the recommended daily amount of fruits and vegetables

People’s weight and overall health are substantially affected by the food they eat. A healthy diet consists of balanced amounts of protein, carbohydrates and fats, with plenty of fruits and vegetables and limited fat and salt. According to the CDC, people who eat a healthy diet with generous amounts of fruits and vegetables have a reduced risk of stroke, type 2 diabetes and certain cancers.7

The Dietary Guidelines for Americans 2015-2020,8 a joint project of the U.S. Departments of Agriculture (USDA) and Health and Human Services (HHS), recommends that each meal include half a plate of fruits and vegetables. This means adults should eat about two servings of fruits and three servings of vegetables per day.

CHSS asked adults about how many fruits and vegetables they ate every day.

Among all adults in the region: 23% ate the recommended amount of both fruits and vegetables in 2017.
4 in 10 Avondale adults drink seven or more sodas or sugary beverages each week

According to the 2015-2020 Dietary Guidelines for Americans, almost half of all added sugar consumed in the nation comes from beverages.⁹ Sugar adds calories to a person’s diet without providing nutrients needed to be healthy. The guidelines recommend limiting added sugars to 10% of daily calories. If people consume more than that, they may not get the nutrients they need from fruits, vegetables, protein and dairy products.

Studies have shown that drinking one or more sugary beverage per day – equivalent to seven or more each week – can increase the risk of obesity,¹⁰ diabetes¹¹ and heart disease.¹², ¹³ While most people know that soda has added sugar, other drinks such as sweet tea, sports drinks and fruit drinks also contain added sugar.

*CHSS asked adults how many sodas and other sugar-sweetened drinks they consumed each week.*

Percentage of Avondale adults who drink seven or more sugary beverages per week

- 7+ 42%
- 0% 20%
- 20% 40%
- 60%
- 80%
- 100%

**AMONG ALL ADULTS IN THE REGION:** 40% drank seven or more sugary beverages each week in 2017.
5 in 10 Avondale adults agree it is easy to purchase healthy foods nearby

Healthy eating is particularly challenging if there is not a place nearby to buy healthy foods. To have a healthy diet, it is crucial that people can buy healthy food such as fruits and vegetables, whole grains and low-fat items without having to travel far.

*CHSS asked participants whether they agreed or disagreed with this statement: “It is easy to purchase healthy foods in my neighborhood such as whole grain foods, low-fat options and fruits and vegetables.”*

The percentage of Avondale adults who agree it is easy to purchase healthy food is the **SAME** as in 2013.

**Percentage of Avondale adults who agree it is easy to purchase healthy foods in their neighborhood**

**AMONG ALL ADULTS IN THE REGION:** 80% agreed it was easy to purchase healthy foods in their neighborhood in 2017.
3 in 10 Avondale residents have experienced food insecurity in the past year

Access to nutritious food is important for health. Food insecurity occurs when people do not have access to healthy food. It may include both eating less food or reduced quality or variety of food. Adults who experience food insecurity are at increased risk for poor overall health and chronic diseases.

CHSS asked adults whether they agreed or disagreed with two statements:

1. Within the past 12 months we worried whether our food would run out before we got money to buy more.

2. Within the past 12 months the food we bought just didn’t last and we didn’t have money to get more.

Agreeing with one or both statements indicates that a family is likely to be food insecure.

**Percentage of Avondale adults who are food insecure** (Graph shows those who agreed with one or both statements.)

- 10% One statement
- 23% Both statements
- Total: 33%

**AMONG ALL ADULTS IN THE REGION:** 24% experienced food insecurity in the past year.
About 3 in 10 Avondale adults report they are current smokers

According to the CDC’s Behavioral Risk Factor Surveillance System (BRFSS), 17% of adults in the United States were current smokers in 2017. This percentage is higher than the Healthy People 2020 goal of 12%. Tobacco use has an impact on all aspects of an individual’s health. Smokers who can quit can add 10 years to their lives.\(^{16}\)

The percentage of current smokers in Avondale remains \textbf{STEADY}, but higher than the Healthy People 2020 goal of 12%.

AMONG ALL ADULTS IN THE REGION: \textit{23\% reported that they were current smokers in 2017.}
3 in 10 Avondale adults allow people to smoke in their home

Secondhand smoke or environmental tobacco smoke (ETS) is a serious danger that does not often get enough attention. According to the CDC, 1 in 4 nonsmokers in the U.S. is exposed to ETS, which is responsible for approximately 41,000 deaths among nonsmoking adults and 400 deaths in infants each year. ETS has been linked to serious negative health outcomes in adults and children, such as stroke, lung cancer, coronary heart disease and sudden infant death syndrome (SIDS).¹⁷

CHSS asked adults whether or not they allow people to smoke in their home.

Percentage of Avondale adults who allow people to smoke in their home

AMONG ALL ADULTS IN THE REGION: 18% allowed people to smoke in their home in 2017.
2 in 10 Avondale adults report high stress

Stress is a normal part of life. It may be short-term (acute), caused by situations such as a presentation or a big test. Stress may also be long-term (chronic), caused by situations such as extended unemployment or a long illness. Stress is the way the body reacts to these stimuli by releasing hormones, increasing heart rate and tensing muscles. \(^{18}\)

CHSS asked, “On a scale of 1 to 10, where 1 means you have ‘little or no stress’ and 10 means you have ‘a great deal of stress,’ how would you rate your average level of stress during the past month?”

**On a scale of 1 to 10 ... how would you rate your average level of stress during the past month?** (Percentages do not add to 100 percent because of rounding.)

**AMONG ALL ADULTS IN THE REGION:** 55% thought a low level of stress was healthy in 2017.
5 in 10 Avondale adults report doing excellent or very good job managing their stress

According to the National Institute of Mental Health, taking steps to manage stress can reduce its negative health impacts. Steps could include exercise, social connection, mindfulness, relaxation or help from a health care provider.

CHSS asked, “How good a job do you think you do managing your stress?”

AMONG ALL ADULTS IN THE REGION: 44% report an excellent or very good job managing their stress in 2017.
Avondale adults’ perceptions of support from their community

Research has shown strong ties between people’s health and the social support they find in their community.20

CHSS asked people whether they agreed or disagreed with three statements about social support in their community:

1. People can depend on each other in my community.

2. Living in my community gives me a secure feeling.

3. People in my community know they can get help from the community if they are in trouble.

People can depend on each other in my community

Living in my community gives me a secure feeling
People in my community know they can get help from the community if they are in trouble

6 in 10 Avondale adults agree they can get help from their community.

AMONG ALL ADULTS IN THE REGION:

- 78% agreed that people can depend on each other in their community in 2017.
- 86% agreed that living in their community gave them a secure feeling in 2017.
- 83% thought people could get help from the community if they were in trouble in 2017.
Avondale adults rate Greater Cincinnati and their neighborhood as a healthy place to live

Choices we make every day affect our health, but so does the community in which we live. The physical and social environment is an important determinant of health. A neighborhood that feels safe can encourage residents to engage in healthy outdoor activities. A neighborhood that feels unsafe can force residents to stay indoors. CHSS asked adults in the region to evaluate their environment.

CHSS asked, “How would you rate Greater Cincinnati as a healthy place to live?”

CHSS also asked, “How would you rate your neighborhood as a healthy place to live?”

AMONG ALL ADULTS IN THE REGION: 71% rated Greater Cincinnati excellent, very good or good as a healthy place to live. Seventy-five percent rated their own neighborhood excellent, very good or good as a healthy place to live in 2017.
About 6 in 10 Avondale adults rate neighborhood homes highly; nearly 8 in 10 rate own home highly

The condition of people’s homes and the homes in their neighborhood can have an impact on their health.

CHSS asked, “How would you rate the condition of the houses and apartments in your neighborhood?” and “How would you rate the condition of the house or apartment where you live?”

The percentage of Avondale adults rating their neighborhood, own home highly is the SAME as in 2013.

AMONG ALL ADULTS IN THE REGION: 83% rated houses and apartments in their neighborhood as excellent, very good, or good. Ninety percent rated their own home as excellent, very good or good in 2017.
Nearly 7 in 10 Avondale adults have a usual and appropriate source for care

One essential element for maintaining good health is regular visits with a doctor or other health care provider. Ideally, patients see the same provider or practice over time so they can receive coordinated, comprehensive health care and preventive health guidance.

CHSS asked adults whether they had a usual source for health care, and where. A private doctor's office, community-based health center, clinic at a retail store or hospital outpatient department are considered appropriate sources of care.

In 2017 adults throughout the region were less likely than in previous years to report a usual and appropriate source of care. This was the first time CHSS has collected these data since the Affordable Care Act (ACA) was implemented in 2014. Many adults in the region who had previously been uninsured gained insurance through the ACA. Research suggests that newly insured adults may not be as settled into a preventive health care routine. This may be one explanation for why the percentage of adults with a usual source of care in our region has decreased.

The percentage of Avondale adults with a usual and appropriate source of care is LESS than in 2013.
9 in 10 Avondale adults have health insurance

Cost can be a barrier to receiving regular health care. Access to appropriate care helps prevent illness, control outbreaks and manage chronic conditions. People without health insurance are less likely than those with health insurance to get the care they need in a timely manner.

AMONG ALL ADULTS IN THE REGION: 71% reported a usual and appropriate source of care in 2017, down from 82% in 2013. Also in 2017, 20% reported no usual source of health care.

AMONG ALL ADULTS IN THE REGION: 92% of all adults had health insurance in 2017.
1 in 10 Avondale adults delayed care due to cost

Even with insurance, health care can be expensive. CHSS asked adults if they had delayed or gone without a doctor’s care in the past 12 months because they needed the money to buy food, clothing or to pay for housing.

CHSS asked, “During the last year, did any household member not receive a doctor’s care because the household needed the money to buy food, clothing or to pay for housing?”

Percentage of Avondale adults who said a member of their household went without a doctor’s care in the past year because they needed the money for something else

AMONG ALL ADULTS IN THE REGION: 8% did not receive care in the past year due to cost in 2017.
The Community Health Status Survey (CHSS), a project of Interact for Health, is conducted by the Institute for Policy Research at the University of Cincinnati. A total of 4,929 randomly selected adults residing in the counties at right were interviewed by telephone between Aug. 10, 2016, and March 8, 2017. This included 1,906 landline interviews and 2,355 cell phone interviews. The margin of error for the overall survey is ±1.5%.

For this report, 366 Avondale residents were interviewed. Researchers contacted residents in census tracts corresponding to the neighborhood and asked them if they live in Avondale. Because census tracts and neighborhood boundaries differ, the survey area for this report extended into North Avondale and Paddock Hills. The margin of error for the Avondale sample is ±5.1%.

Reports in this series examine the health of African Americans and Latinos, as well as the health of people who live in the Place Matters communities of Avondale, Covington, Madisonville, Price Hill and Walnut Hills.

For more information about the survey’s methodology, go to www.interactforhealth.org/about.chss2017.
1. BMI is calculated by dividing a person’s weight in pounds by his height in inches squared and then multiplying that result by 703.
