

Employer-provided insurance rises; uninsured rate drops

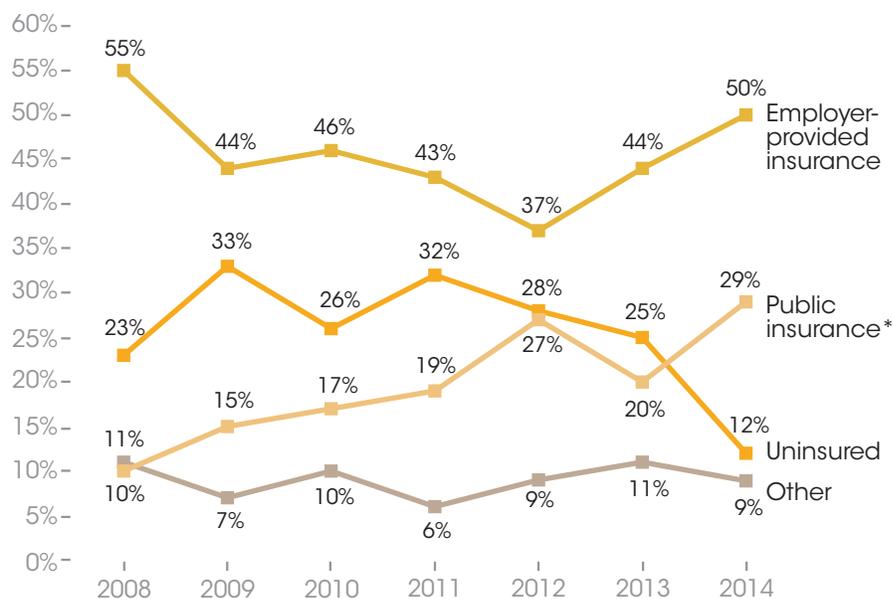

Having health insurance is an important factor in being able to get needed healthcare. Since 2008, the **Kentucky Health Issues Poll (KHIP)** has included questions about health insurance coverage to learn about the insurance status of Kentucky adults. Because nearly all Kentuckians 65 and older (97%) are insured, this summary focuses on Kentucky adults ages 18-64.

More working-age Kentucky adults have employer-provided health insurance

Five in 10 working-age adults (50%) reported being insured through their employer or their spouse's employer. Three in 10 (29%) had some type of public health insurance.¹ Only 1 in 10 working-age adults (9%) reported having some other type of health insurance.

The percentage of adults with employer-provided insurance has steadily risen since a low point in 2012. That year fewer than 4 in 10 adults (37%) were insured through their employer or their

* Medicare, Medicaid, military benefits and combinations of the three.

spouse's employer.

Steep drop in the percentage of uninsured adults

Stability of health insurance, measured as continuous insurance coverage for the past 12 months, is an important factor in accessing healthcare. KHIP found that 1 in 10 adults ages 18 to 64 (12%) reported being currently uninsured. An additional 1 in 10

adults (12%) were insured but had lacked health insurance at some point in the previous year.

The percentage of adults with unstable insurance has declined considerably since 2013, when 3 in 10 Kentucky adults (33%) had been uninsured in the previous 12 months. This decline may be in part due to kynect, which began enrollment in October

Continued on back

¹ Includes Medicare, Medicaid, military benefits and combinations of the three.

These findings unless otherwise noted are from the Kentucky Health Issues Poll, funded by the Foundation for a Healthy Kentucky and Interact for Health. The Kentucky Health Issues Poll was conducted Oct. 8-Nov. 6, 2014, by the Institute for Policy Research at the University of Cincinnati. A random sample of 1,597 adults from throughout Kentucky was interviewed by telephone. This included 1,086 landline interviews and 511 cell phone interviews with cell phone users. In 95 of 100 cases, the statewide estimates will be accurate to $\pm 2.5\%$. There are other sources of variation inherent in public opinion studies, such as non-response, question wording, or context effects that can introduce error or bias. For more information about the Kentucky Health Issues Poll, please visit www.healthy-ky.org or www.interactforhealth.org/kentucky-health-issues-poll.

2013. As part of the Affordable Care Act in Kentucky, kynect allows Kentuckians, including those eligible for the expanded Medicaid program and Kentucky Children's Health Insurance Program (KCHIP), to search for and enroll in insurance plans. Last year, 521,000 people enrolled through kynect, 75% of whom were previously uninsured.²

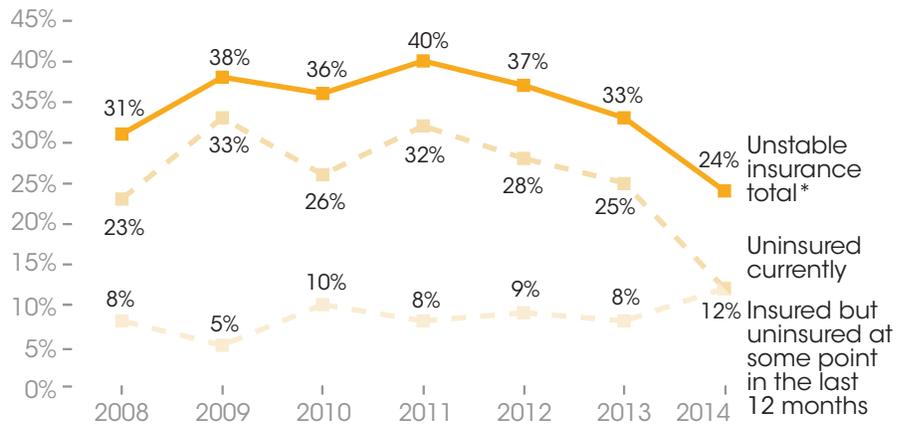

Uninsured rates for lower-income adults decline

The rate of Kentucky adults living at or below 138% of the Federal Poverty Level (FPL)³ who are uninsured has declined considerably. Only 1 in 10 adults living at or below 138% FPL (12%) reported being uninsured. This compares with 3 in 10 adults (34%) in 2013. In 2014, 2 in 10 adults living between 138% and 200% FPL (20%) and about 1 in 10 adults living above 200% FPL (9%) reported being uninsured.
