Fruits, vegetables easy to access, but cost an issue for some Kentuckians

Healthy eating is critical to living a healthy life. In 2013 and 2016, the Kentucky Health Issues Poll (KHIP) asked Kentucky adults about their access to and consumption of healthy foods.

**Most report easy access to healthy foods**

The vast majority of Kentucky adults (80%) agreed that it is easy to buy healthy foods such as whole-grain foods, low-fat options, and fruits and vegetables in their neighborhoods. This was similar to 2013 (81%).

Access to healthy food differed by household income. Nearly 9 in 10 Kentucky adults in households earning more than 200% of the Federal Poverty Guidelines (FPG) (87%) reported easy access. That compares with more than 7 in 10 Kentucky adults with household incomes of 200% FPG or less (74%).

**Cost poor for some Kentucky adults**

KHIP also asked about the cost of fruits and vegetables. The perceived cost of fruits and vegetables varied widely by self-reported health status. Kentucky adults reporting fair or poor health were more likely to report fair or poor produce costs (60%) compared with adults reporting excellent or very good health (33%). This variation in perceived cost was similar to 2013.

**Four in 10 do not meet fruit and vegetable recommendations**

The U.S. Department of Health and Human Services and the U.S. Department of Agriculture offer dietary guidelines for healthy

---

1. In 2015, 200% of the Federal Poverty Guidelines was $48,500 for a family of four.

2. KHIP asked, “And thinking about your primary source for fruits and vegetables … how would you rate the cost of fruits and vegetables they have available? Would you rate it excellent, very good, good, fair, or poor?”

3. KHIP asked, “Would you say that in general your health is … excellent, very good, good, fair or poor?”

---

These findings, unless otherwise noted, are from the Kentucky Health Issues Poll, funded by the Foundation for a Healthy Kentucky and Interact for Health. The Kentucky Health Issues Poll was conducted Sept. 11-Oct. 19, 2016, by the Institute for Policy Research at the University of Cincinnati. A random sample of 1,580 adults from throughout Kentucky was interviewed by telephone. This included 827 landline interviews and 753 cell phone interviews with cell phone users. In 95 of 100 cases, the statewide estimates will be accurate to ±2.5%. There are other sources of variation inherent in public opinion studies, such as nonresponse, question wording, or context effects that can introduce error or bias. For more information about the Kentucky Health Issues Poll, please visit www.healthy-ky.org or www.interactforhealth.org/kentucky-health-issues-poll.
eating. They suggest that half of each plate be made up of fruits and vegetables.

About 4 in 10 adults (42%) did not eat the recommended amount of either fruits or vegetables. More than 2 in 10 adults (25%) ate the recommended daily amount of fruits only while about 1 in 10 adults (12%) ate the recommended daily amount of vegetables only. Two in 10 Kentucky adults (21%) ate the recommended daily amount of both fruits and vegetables. This is unchanged from 2013.
